As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Consolidated flowline failure occurred on May 24, 2020, releasing approximately 10 gallons of produced hydrocarbon fluid. Consolidated line and all associated wells that produced in to the line were shut in immediately. No pooling of liquids at surface were present to recover. Full extent of impact will need to be determined during excavation/hydrdo vac activities.

Description

	Based on review of the information submitted in project 15691 which is ongoing at this time, it is concluded that the proposed investigation activities and proposed remedial actions in the approved site investigation and remediation plan will be adequate to remediate impacted soils and groundwater (if present) at the site of the spill. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
