General Comment:

On 7/9/2020 Catherine Roy conducted a reclamation and stormwater inspection. During this inspection the following compliance issues were observed:

- Weeds need to be controlled by 11/1/2020. Due to the nature and extent of the infestation a multipronged treatment approach will be needed, as well as subsequent monitoring and control.
- Removed unused equipment/risers or provide documentation as to their use by 8/10/2020.

See below, and attached photos for additional detail.

Unused or unneeded equipment onsite? _____

Comment _____

A riser was observed near the former well pad entrance. It is not maintained and appears to have been used to service the plugged well. Additionally, a riser is present in the southeastern well pad area and does not appear to be associated with an active pipeline.

Corrective Action _____

-Removed unused equipment/risers or provide documentation as to their use by 8/10/2020.

Comment: Approximately 3000 Russian knapweeds observed within the project area. Revegetation is progressing in portions of the project area, but remains sparse in the former well pad area. Final reclamation will be assessed after active remediation project is resolved.

Corrective Action:

Date **11/01/2020**

Control weeds at the appropriate time, and no later than 11/1/2020. Per CSU extension, control of Russian knapweeds requires a multi-pronged treatment approach as a single control strategy will not likely be sufficient. Areas treated for Russian knapweed should be reseeded with desirable perennial grasses in the fall to compete with the treated knapweed.
