Comment:

A portion of the access road remains per approved variance. Previous erosion issues along the north/south section of road have been regraded. This area needs to be monitored and may require additional stabilization. The portion of reclaimed road to the location has some bare areas that may require additional growing seasons to adequately establish vegetation. The vegetation at the location is well established throughout the location. A perimeter fence remains around the location. Continue to monitor and manage this site until Final Reclamation has Passed.
