Subject: Re: LW USA 1 Analytical Discussion

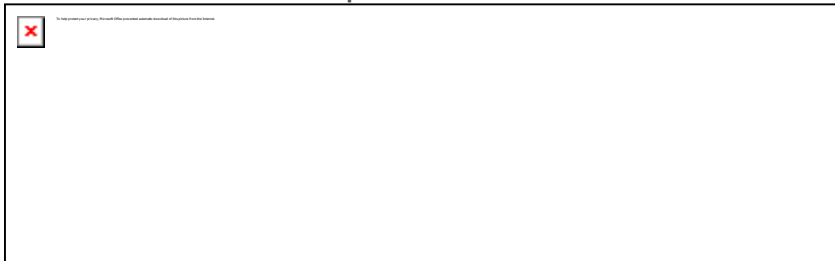

Blair,

Based upon the information provided, the COGCC approves of your request for a reduced analyte suite (SAR and pH) to delineate the horizontal extent of impacts resulting from Spill/Release ID #476624 to the east and south.

Please be sure to attach a pdf copy of this correspondence and the corresponding analytical data to the next Supplemental eForm 19.

Thank you.

Steven – following our conversation yesterday afternoon, I wanted to provide you with the analytical results table to support our request for a reduced analyte suite for the Logan Wash USA 1 spill (Spill ID 476624, Form 19 Doc 402413094). Based on the sample results, Caerus plans to delineate the horizontal extent of contamination of the east wall and south wall of the excavation for SAR, and pH. Caerus will also conduct vertical delineation of Spill Path locations 1 and 2 to be analyzed for SAR.

Background arsenic samples are provided on the spreadsheet as well from the Logan Wash USA 1-31 (Location ID unknown due to database being offline, latitude = 39.401520, longitude = -108.254610) located approximately 0.8 miles to the north.

Once sample results are received, Caerus will provide a supplemental Form 19 requesting closure, or an Initial Form 27 if additional excavation and delineation is required.

Please let me know if you have any questions or concerns with the provided request.

Thank you,

Blair Rollins
