General Comment:

This inspection is in response to a complaint regarding reclamation- see the complaint and final reclamation sections for more detail.

Note: This is the second complaint submitted regarding reclamation. The first complaint submitted was 02/2019 (Complaint #: 200446939).

Comment:

	<p>In response to the previous complaint, Operator excavated soil within the production area and exported the removed subsoil due to concerns about road base left behind. Operator then imported clean fill material to replace the removed subsoil and spread new topsoil that was equivalent in soil chemical and physical properties of reference soils.</p> <p>At a later date, Operator had to address subsidence by added soil material, tilled the added soil material, and recontoured the area. Complainant believes poor quality soil was used to address subsidence.</p> <p>Based on field observations, the added soil material appears to have a high silt content which does not appear to be consistent with reference soils. Refer to the attached inspection photos.</p>	
Corrective Action:	<p>Per Rule 1004, the same standards as established for interim reclamation under Rule 1003 shall be performed. As to cropland per Rule 1003.b., if subsidence occurs in such areas additional topsoil shall be added to the depression.</p> <p>Per Rule 1004, Operator shall perform soil testing to confirm the added soil material to address subsidence is equivalent to reference soils and will meet the growth requirements for alfalfa. Operator shall coordinate to perform soil testing in the presence of COGCC staff and the complainant. Refer to the COGCC Comments sections for soil sampling requirements.</p> <p>There is no corrective action date because this might be referred to Enforcement.</p>	Date _____

COGCC Comments

Comment	User	Date
Operator shall report the following soil chemical and physical properties from each sample: depth of sample, percent texture estimates, organic matter (%), pH (1:1), soluble salts (mmohs/cm, 1:1), N (ppm, FIA), P (ppm, Bicarbonate), K (ppm, exc. NH ₄ OAc), CEC, and SAR.	binschusc	07/27/2020
Note 1: the above soil sampling was previously performed to confirm new topsoil being imported was equivalent to reference soils.		
Note 2: To ensure consistency, Operator shall have the same contractor, Ag Professionals, conduct the required soil sampling.		
Note 3: Operator shall submit the required soil sample results via Form 4 Sundry Notice.		
Note 4: Once COGCC staff reviews the soil sample results, Staff will make the determination on whether or not the Operator needs to excavate the added soil used to address subsidence, and import new topsoil that is equivalent to reference soils, which meets the growth requirements for alfalfa.
