CORRECTIVE ACTIONS:

1 CA# 141145

Corrective Action: Contact NW EPS John Heil (john.heil@state.co.us) regarding maintenance requirements of monitoring wells on Location, or proper abandonment procedures. Date: 08/14/2020

Response: CA COMPLETED Date of Completion: 08/20/2020

Operator Comment: The "monitoring wells" noted in the inspection report are actually soil-gas extraction points. They were installed during the Prather Spring investigation around 2009. These are shallow 1/4-inch teflon tubes that were used to collect soil gas samples. These soil-vapor extraction points were installed to shallow depths of approximately 12

- 20 feet bgs. The Prather Spring matter was resolved several years ago, and the soil vapor points have not been used since and are no longer needed. The extraction points (surface cap and 1/4-inch teflon tubing) have been removed and backfilled.

COGCC Decision: Approved pending re-inspection

COGCC Representative: Approved pending re-inspection of this FIR resolution acknowledges the document was received. A field inspection will be conducted at a future date to evaluate compliance with COGCC rules.

OPERATOR COMMENT AND SUBMITTAL

Comment: The shallow soil-gas extraction points have not been used for several years, and are no longer needed. The soil-gas extraction points (surface cap, concrete collar, and 1/4-inch teflon tubing) have been removed and backfilled. See attached photos.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct, and complete.
