Corrective Action: Comply with Rule 1204.a(1) (note: better container will help with loose trash)

Date: 09/01/2020

Also ensure proper disposal of E&P waste (filters)

Response: CA COMPLETED

Date of Completion: 08/28/2020

Operator Comment: The open-top solid waste dumpster at the YWD-1 location was replaced with a bear-proof solid waste dumpster on 08/28/2020.

The corrective action included the comment "Also ensure proper disposal of E&P waste (filters)". KM manages

the injection well filters as solid waste along with other solid waste generated at the injection well locations. Samples of spent filters from KM injection well locations were sent to a laboratory for analysis of BTEX/TPH, TCLP Metals and Hazardous Characteristics (Reactivity/Corrosivity/Ignitability) and a paint filter test. The results of analyses showed that the filters do not display any concentrations of hazardous characteristics, toxic metals or volatile organic compounds that exceed RCRA Subtitle C thresholds or COGCC Table 910-1 standards (soil). The results of analyses, along with the results of the paint filter test, were requested by and submitted to the Montezuma County Landfill in order for the filters to be accepted for disposal as solid waste. The spent filters are dried completely before being placed in the dumpster.
