Anders Env. Project Number: Patara07302020
July 2020

On July 22nd 2020 Patara Oil and Gas hired Anders Environmental to conduct vegetation maintenance on their Colorado Properties to conform with the Colorado Oil & Gas Conservation Commission's Rule 1004.

Anders Environmental walked each impacted property to hand spray any Russian Knapweed and to cut Thistle heads to prevent the spread during the next growing season. The team used the locally recommended herbicide along with surfactant and marking dye to ensure each weed was properly coated. It is estimated that the team cut and bagged over 50,000 thistle heads during the project.

Photos for the project can be found below.
