This well was drilled to a T. D. of 5924' and there were no productive zones encountered. We propose to plug the well by placing cement plugs at approximately 3300' to 3730', a 100' plug from the shoe down and a 75' plug inside surface casing. All intervals between the cement plugs will be filled with 9.6# mud laden fluid. A cap will be placed in the top of casing. A dry hole marker will be installed with the well name, location and company name noted thereon. No attempt will be made to recover surface casing.
