Please review the specifics of this incident and provide feedback as needed. Due to reporting requirements, if no response to the contents of this email are received within 24 hours, agreement with the characterization and corrective actions will be assumed.

Incident Description:

Lease operator was scanning his trends and found an inconsistency on the 28-2A flow line. Pressure had dropped from 324 to 199 psi, and a small underground leak on the line was shut in at 8:00 AM. No spill is currently visible, and volume is undetermined, but I presume this may be reportable based on previous incidents. Waiting for more information to know for sure.

Corrective Action - Responsible Department

Determine Volume - Chad Tompkins

Follow up sampling/remediation if needed - Brett Middleton

Verbal report was given, follow up with form 19 - Romana Cowden
