DAILY WORK RECORD

TIME	DAILY WORK RECORD
8:30	Arrive location. Meeting to discuss planned work and tail gate safety meeting. Prep for work.
	Disconnect flowlines at treater. Hook in vacuum truck and suck on lines and treaters to remove fluids. Remove hatch from small treater. Tear down treater shed and load debris for haul off. Remove hatch from large treater. No fluids in either treater to be pulled. Lay down small treater.
	Lay down large heater treater. Excavate and remove deadmen.
	Excavate area in front of entry hatch on unused 300 BBL tank to accommodate trough to catch fluids during clean out. Remove entry hatch. No fluids in tank. Clean out tank and reinstall hatch.
	Contractor agrees to pull fluids from production tank based on minimal cleaning and fluids from the unused tank and treater. Production tank contains 125 BBLS of fluids. Remove 80 BBLS. While installing fittings to pull fluids out of tank contractor tightened up body on sales valve approximately a 1/2 turn which appears to of stopped drip from thid valve.
	Excavate, cement plug and abandon (6) flowline risers at heater treater. (1) 1", (3) 2", and (2) 3". Take Trimble GPS screen shot. Backfill and dress site.
	Excavate, cement plug and abandon (2) flowline riserson E side of meter run shed. (1) 2", and (1) 3". Take Trimble GPS screen shot. Backfill and dress site.
	Take Trimble GPS screen shot at wellhead.
4:30	Clean up site, shut down for night, and depart location.

PLAN FOR TOMORROW

Load and remove decommissioned treaters. Load pipe , pipe fittings, and remaing debris for haul off. Dress location where excavations had occurred with backhoe. Load equipment and depart.
