**General Comment:**

On 9/29/2020 COGCC Staff, Kris Neidel inspected the Gov'T Pohlman #2 well pad. Well was SI at the time of inspection. The area adjacent to the well had been used for onsite landfarming of soil. See Remediation Project number 10638 for details. The landfarmed soil was hauled for offsite disposal. A Representative of HRL Environmental, Cody, was present to collect soil samples to confirm that no impact remains below former soil storage area. The area was probed by HRL and COGCC staff across the entire footprint of soil storage area. NO remaining impact was detected by observation (smell, staining). Soil samples were collected for lab analytical. A surface flowline from the wellhead going off the pad to the east was observed, it appeared that the flowline went near the Gov'T Pohlman #1 wellpad. Required Action: within 30 days of receipt of data from laboratory, results should be submitted via Form 27 supplemental (Project 10638).
