Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A flow line failure was discovered during the routine daily trending of production data. The flow line that failed was connected to the 5A-27 well's wellhead. In order to confirm the failure, the lease operator pressure tested the line. The line lost pressure during the test. The line has been isolated and we are no longer producing fluids through it.
