#### COMMENTS:

Per Form 4 DOC#: 402386713 Extraction performed an MIT on the Gooding #1 on 10/12/2020 to analyze the source of the bradenhead pressure. The casing passed the pressure test. Extraction then ran the attached CBL to analyze the primary cement job. Based off the results of the CBL, casing pressure test and annual bradenhead testing Extraction requests to cut and pull casing from 3,030', run back in hole with an external casing patch to reland 5-1/2" 15.5# on the casing stump at 3,030'. A DV tool will be staged at 2,000' in the new casing string. Once the 5-1/2" 15.5# casing is relanded on the casing stump at 3,030' a 100sx cement stage job will be pumped through the DV tool at 2,000'. The anticipated cement coverage will be from 2,000' to 1,500'. After WOC Extraction will drill out the DV tool, run a CBL to verify cement coverage and perform a charted MIT to return the well to production.
