Operator Comments:

Alex: I sent you an email on 6/30/2020 requesting closure of this spill; please disregard that email.

Spill #1632059 occurred 01/11/2010 at Conn Creek 1, facility #412058, with OXY USA WTP LP as the operator (operator #66571).

A large slug catcher located north of Cascade Creek Central Water Handling Facility (CCCWHF) receives gas and liquids from the field. The liquids are dumped to the CCTF feed tank for separation, downstream of the CCCWHF. On the day of the incident, the slug catcher was receiving greater than average volumes of liquids due to pigging operations and bringing on new wells. Because the slug catcher could not dump as fast as the liquids were coming in, the liquid level in the slug catcher reached the gas supply resulting in condensate filling the drip tank and flooding the dump valve control. This flooding out caused the valve to stick in the open position resulting in a large volume of liquids being sent to the CCTF feed tank. The fluids eventually ran the tank over resulting in an ~25bbl spill (primarily condensate) inside the lined secondary containment.

The fluids were extracted from the lined secondary containment by vacuum truck and placed into a condensate settling tank at the CCCWHF.

Laramie Energy is requesting closure of this spill; eForms will not allow the completion of a Supplemental Form 19 to request closure.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
