**OBJECTIVE - Temporary abandon well for G35 Development**

**Procedure**

- 1 Measure and record pressure on casing and bradenhead. Report any pressure to completion supervisor
- 2 MIRU WOU. NU 5k BOP and pressure test.  
  
Prep to POOH with ~10318 ft of 2 3/8 inch tubing. This area has been known to have sand fill and a potential of stuck tubing. Monitor unland and string weights accordingly. Inspect and LD tubing. Assess whether to keep tubing or to remove from inventory.
- 3
- 4 RU wireline, RIH with CIBP, set at 8300 ft. POOH with wireline, dump bail 2 sacks of cement on top of CIBP.
- 5 Pressure test casing and CIBP to xxx psi. Winterize well.
- 6 NU Wellhead to TA the well for pending drilling operations.
- 7 RD WOU.
