SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

No further source removal is necessary.

No remediation is necessary.

In order to address the arsenic exceedances exhibited in the soil sample collected on 10/12/2020, Caerus is requesting consideration for the COGCC Table 910-1 Concentration Level for arsenic under guidelines set forth under FAQ 31. Caerus believes the request for FAQ 31 consideration is acceptable as the arsenic results for the soil samples were below background concentrations. Samples collected from the location were used for comparison. Table 1 of the attached document summarizes background analytical results and reports are attached to that document. Please see Figure 2 of the attached document which depicts background soil sampling locations.

| | Based on review of information presented it appears that no further action is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if surface and/or ground water is found to be impacted, then further investigation and/or remediation activities will be required at the site. In addition, the non-working surface area disturbed by the remediation activity shall be reclaimed in accordance with the 1000 Series Reclamation Rules including the establishment of vegetative cover on non-cropland and successful growth on cropland. Landowner must approve reclamation of cropland. |
