COMMENTS:

Mustang respectfully requests COGCC approval to conduct an alternate MIT on the Clough 27-11-6S-94W with lower pressure. Mustang will monitor braidenhead pressure for 24 hours while the well is shut in. This will test the braidenhead for pressure using the wells own energy in the production casing. Strip charts will be provided on both the production casing and braidenhead.

The well was shut in for surface facility work, and Mustang has no reason to believe that the wellbore integrity is compromised. Unfortunately, due to extenuating circumstances with COVID and work force availability, the well remained shut- in past the 24 month mark in April 2020. COGCC issued a warning letter on September 16, 2020 (Doc #402491048) notifying Mustang that an MIT is due. The timeline given by COGCC to complete an MIT is December 31, 2020. Mustang does not foresee rig availability prior to that date.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____
