COMMENTS:

The Bradenhead test dated 7/20/2020 had an initial pressure of over 50psi. Extraction was unable to successfully mitigate the bradenhead pressure through a blowdown strategy. Per Operator Guidance Order NO. 1-232 Extraction submits the following as an alternate Bradenhead mitigation strategy:

To comply with the operator guidance Extraction requests to route the bradenhead gas to a catadyne heater within 20' of the wellhead to maintain bradenhead pressure below the 50psi threshold. Extraction has left the bradenhead shut-in after completing the bradenhead blowdown mitigation strategy.
