Steve,

We were able to get the casing out at 1000ft. The well had no BH pressure so we pumped a short stub plug to 854ft. No pressure or flow again today. We are going to finish it out.

We did cut about 27ft shallower than the Form 6. Attached is the log. Sorry I should have sent this over earlier.

Steve,

We are headed back out to finish this one.

Quick change:

1. Replace balanced plug in casing at 2500ft with a CIBP w/ 2sk at 1990ft.

We are planning on relogging this well to confirm the cut depth.

Please let us know if that works.

Thanks,

Ben Hollar
