# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Approximately 10,250 cu/yds of impacted soil was treated by mixing hydrogen peroxide into the soil and 7,400 cu/yds of impacted soil was removed from the location and disposed of at a certified landfill. Confirmation soil samples were collected above the phreatic zone from the excavation base and sidewalls to determine the lateral and vertical extents of impacts.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Monitoring wells were installed to delineate dissolved phase impacts. These wells will be sampled on a quarterly basis to monitor natural attenuation. Additional monitoring wells will be installed prior to January 25, 2021 in order to obtain point of compliance. MW23 and MW24 had measurable amounts of LNAPL and were not sampled, these monitoring wells have a solar powered vapor extraction system installed to eliminate LNAPL. Bi-weekly gauging of these wells will take place to determine the effectiveness of the remedial system. A total fluid extraction pilot test was implemented and the data will be provided in the next groundwater monitoring event. Air samples were collected from the blower on the LNAPL extraction system to ensure compliance with CDPHE air emission standards.
