## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	190' N-S x 160' E-W x 12 ft bgs	Soil Samples/Lab Analysis

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On July 21, 2007, a produced water release occurred at the UPRR 43 Pan Am B 1 Salt Water Disposal facility when a loose fitting in the control room released 15 barrels (bbls) of produced water within the tank battery berm. The petroleum hydrocarbon impacted soil was excavated. A Form 27 (Document No. 1981125) was submitted to the Colorado Oil and Gas Conservation Commission (COGCC) in January 2008 regarding this release.

Since the July 2007 release, there have been three subsequent releases at the site. Twelve bbls of produced water were released inside the tank berm on January 1, 2009, 47 bbls of oil were released inside the tank berm on July 15, 2009, and, 22 bbls of produced water were released inside the tank berm on November 23, 2010. In each instance, produced water was recovered at the surface and soil exceeding the COGCC allowable levels for total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and total xylenes (BTEX), and/or specific conductance (EC) was left in place at the conclusion of the limited excavation and assessment activities with the understanding that additional soil removal would be completed upon decommissioning of the facility.

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Approximately 5,700 cubic yards of petroleum hydrocarbon impacted soil were removed from the 2012 excavation and transported to the Kerr-McGee Land Treatment Facility in Weld County, Colorado, for recycling. Groundwater was not encountered in the excavations. Based on assessment activities, impacted soil remains left in place. Further assessment activities are being considered. The excavation locations and estimated extent of impacted soil left in place is depicted on the Site Assessment Map attached as Figure 1.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Petroleum hydrocarbon impacted soil was excavated in January and February 2012. Additional remedial options will be assessed following completion of assessment activities.
