## **DESCRIPTION OF IMPACT**

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	GROUNDWATER	MW-1	monitoring
Yes	SOILS	during excavation	during excavation

## **INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Limited excavation and stockpiling of visibly impacted soils on September 18, 2014. Collected initial soil samples for laboratory analysis. September 25, 2014 lab results confirmed release. Approximately 250 cubic yards of additional impacted soils were excavated and sent for disposal at Waste Management's North Weld County facility on October 3, 2014.

## **PROPOSED SAMPLING PLAN**

### **Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

### **Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

The concentration of benzene in groundwater from MW-1 has fluctuated since the original April 2015 sampling event. The variations in benzene concentrations in this well may be due to seasonal groundwater fluctuations, but benzene is consistently present and not steadily decreasing, indicating that the source is still present below the onsite DCP gas line which cannot be excavated beneath. Impacted groundwater does not extend to the locations of the other monitoring wells. Natural attenuation will continue to be monitored.

### **Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## **Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? Yes \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Initial soil excavation based on staining, odors, and final laboratory analytical results has been completed at location of former produced water vessel.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

The concentration of benzene in groundwater from MW-1 has fluctuated since the original April 2015 sampling event but has decreased overall. The variations in benzene concentrations in this well may be due to seasonal groundwater fluctuations. Impacted groundwater does not extend to the locations of the other monitoring wells. Natural attenuation will continue to be monitored.

## GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

The concentration of benzene in groundwater from MW-1 has fluctuated since the original April 2015 sampling event. The variations in benzene concentrations in this well may be due to seasonal groundwater fluctuations, but benzene is consistently present and not steadily decreasing, indicating that the source is still present below the onsite DCP gas line which cannot be excavated beneath. Impacted groundwater does not extend to the locations of the other monitoring wells. Natural attenuation will continue to be monitored on a biannual basis, in June and December.
