Fluid(s) Spilled/Released (please answer Yes/No):

Was one (1) barrel or more spilled outside of berms or secondary containment? Yes
Secondary containment, including walls & floor regardless of construction material, must be sufficiently impervious to contain any discharge from primary containment until cleanup occurs.

Were Five (5) barrels or more spilled? Yes

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Release of 167.59 bbl produced fluid from flowline riser. All fluid stayed on location within secondary containment berm. All fluids recovered via vac truck, and affected area water washed (wash fluid also fully recovered).

If "Other" selected above, specify or describe here:

Describe Incident & Root Cause (include specific equipment and point of failure)

Release of 167.59 bbl produced fluid from a cement lined flowline riser, due to internal corrosion. All fluid stayed on location within secondary containment berm. All fluids were recovered.

Describe measures taken to prevent the problem(s) from reoccurring:

Replaced riser with coated piping.

OPERATOR COMMENTS:

The location and surrounding area outside of location berm was inspected on April 22, 2020 for evidence of the release noted on the original Form 19 submittal. No evidence of the release was noted on or off location. Some small areas of surface salt crusting was noted on pad surface, however it is unlikely related to the historical spill that occurred in 2016 as the pad surface is bladed each spring. A photographic record is attached. Based on these site observations Chevron requests closure of this spill. Chevron is requesting closure of Spill ID 401505457 under Table 910-1 due to the initial release occurring during Table 910-1 rule. Samples were collected prior to the Table 915 adoption.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
