COMMENTS:

Request to flare until the gas reaches sufficient pressure to be sold into the REP gas gathering system. Nickel Road plans to be connected to REP gas gathering system at onset of flowback and will sell into REP system when gas reaches sales line pressure (anticipate 120 – 160 psig sales line pressure).

Anticipated flaring volume is 1.25 MMcf over 8-10 days. All gas not sold will be combusted through RP Services' combustor, rated at 99.9% destruction efficiency.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____

Description

Operator Comments:

Nickel Road Operating requests authorization to flare (using a green completion setup to flare through a high-efficiency combustor) gas during flowback in accordance with Rule 903.c.(3)B. Flaring is necessary during early flowback while the wells are being de-watered, but lack sufficient gas /gas pressure to utilize the gathering/sales line. Flowback operations are currently anticipated to commence on 3/1/2021. Please see additional details on 'Engineering / Environmental' tab.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
