COMMENTS:

TEP Rocky Mountain LLC (TEP) would like to propose modifying the surface hole casing centralization plan pursuant to COGCC Rule 408.g.(1)E on the Federal RG 543-18-297 well.

With the high loss circulation in the Ryan Gulch field during drilling through the Dissolution Surface section from ~1700-2200', TEP would like to eliminate centralizers from 1156' MD to surface. A total of 14 centralizers were installed per COGCC Rule 408.g.1.b.c.d. with top centralizer placed 1156' MD. The DV tool was installed at 1325'-1322' MD.

With the difficulty achieving cement to surface on various wells and having to run 1.9" tubing down deep to get the surface hole topped off, it makes it near impossible to run the tubing through the centralizers if we follow the COGCC requirement per Rule 408.g. (1) A, D. This will assist in topping out and obtaining quality cement to surface and minimize any voids throughout that interval by not reaching the top of cement after pumping the second stage cement job.
