### Surface Water

0 Number of surface water samples collected

   Number of surface water samples exceeding 910-1

If surface water is impacted, other agency notification may be required.

## OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☐ Were background samples collected as part of this site investigation?

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)   

Volume of liquid waste (barrels)   

☒ Is further site investigation required?

Bedrock was observed to be impacted in the center borehole, and stepout boreholes were completed until soil and bedrock (when recovered) appeared to be free of impacts. Thus, determination of horizontal and vertical delineation of soil impacts is based on both soil analysis results and field measurements/observations. Based on the analytical and field screening results, horizontal impacted soil delineation is considered complete. Vertical impacted soil delineation is considered complete because soil impacts were observed to extend to the bedrock surface in the center borehole, and bedrock was recovered at 16 ft bgs. Investigation of bedrock impacts was conducted within the abilities of the drilling equipment used. However, the horizontal and vertical extent of bedrock impacts remains unresolved. Please see the attachment for plan to complete delineation.

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Please see the attached remedial action plan for remedial options. It has been recommended that delineation be completed before choosing a remediation practice to better understand the full content of contamination.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

The top two remedial option candidates include in situ soil vapor extraction (SVE) and SVE with in situ soil heating. It has been recommended that additional soil data be gathered prior to final selection of remedial technology to be implemented. Please see the attached remedial action plan and plan to complete delineation for more information.
