Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Historical impacted soil was discovered following cut and cap operations at the Green XX 8-3 Wellhead location. The release became State reportable on March 10, 2021, due to the quantity of impacted soil excavated. A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.

How was extent determined?

On February 24, 2021, a confirmation soil sample was collected from the base of the wellhead cut and cap excavation area and submitted for laboratory analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, and total petroleum hydrocarbons (TPH) - gasoline range organics (GRO: C6-C10) by United States Environmental Protection Agency (USEPA) Method 8260D, TPH - diesel range organics (DRO: C10-C28) and oil range organics (ORO: C28-C40) by USEPA Method 8015D, pH, specific conductance (EC), and SAR by saturated paste method, and boron by hot water soluble soil extract method. Analytical results indicated that constituent concentrations in the soil sample were in full compliance with the COGCC Table 915-1 standards, with exception to the pH value. Approximately 50 cubic yards of impacted material have been removed and transported to the Buffalo Ridge Landfill in Keenesburg, Colorado for disposal. Site assessment activities are ongoing and will be summarized in a forthcoming Form 27- Supplemental Site Investigation and Remediation Workplan under Remediation Project No. 16286 (approved Form 27 Document No. 402577912). A topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.

Based on pH-impacted soil observed at this location, confirmation soil samples will be submitted for laboratory analysis of pH by saturated paste method.
