Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On March 8, 2021, a hole in a temporary water tank resulted in the release of approximately 220 barrels of produced water within secondary lined containment at the Buddy 17-7HZ Pad. A small leak in the containment's lining also resulted in the release of approximately 0.75 barrel of produced water outside of containment onto the ground surface. The release was contained onsite. Assessment activities are ongoing, and the assessment details will be summarized in a supplemental report. The topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.
