How was extent determined?			
Extent is undetermined at this time. The spill was discovered when it was spotted daylighting at surface. It is currently suspected that it is a leak in the flowline. Current surface conditions are too muddy from the recent heavy spring snowfall to excavate and investigate. KPK will begin excavations as soon as conditions are suitable. The well has been shut in and the flowline has been depressurized and isolated. The free product at the surface has been cleaned and removed. A top layer of soil was scraped off as part of the product clean up. KPK does not have photos at this time, as soon as weather conditions allow for dry enough conditions, KPK will resubmit a 19S with photos. When an excavation has exposed the cause, KPK will submit another 19S with the additional details required.			
Soil/Geology Description:			
Due to the recent heavy spring snowfall and muddy conditions, a qualified person has not been able to access the location to determine the soil type according to the USCS. KPK will submit an additional 19s when soil type has been determined.

**OPERATOR COMMENTS:**

This form is being submitted to meet the deadline for Form 19s submittal. Heavy snowfall has blocked site access due to muddy conditions. Photos and additional info required in a 19s (root cause, ect..) will be submitted in a subsequent Form 19S when the location becomes accessible.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
