**CORRECTIVE ACTIONS:**

1 ☒ CA# 146803

Corrective Action:

Date: 10/09/2015

Weeds need to be controlled. Areas with weed infestation and the majority of the reclamation area needs revegetation. Livestock exclusion may be needed for successful vegetation establishment. Followup vegetation and weed monitoring as well as subsequent treatment are required. Monitoring data may be requested. Corrective action is back-dated to document duration of non-compliance (10/9/2015).

New corrective action (in addition to action above): Submit a weed control and revegetation plan by 3/31/2021 with a detailed and site specific schedule for treatments, weed control and revegetation methods, seed mix, mulching, monitoring to control infestation and stabilize location.

Response: CA COMPLETED

Date of Completion: 03/31/2021

Operator Comment: See Attached Weed Management Plan of site.

COGCC Decision: Approved pending re-inspection

COGCC Representative: -herbicide treatment in the spring after seeding will likely result in desirable seedling mortality. Mechanical or manual methods of treating weeds right after seeding may better prevent seedling mortality.  
-Plan indicates that hydromulch "is recommended". Inspector recommends mulching such as a high quality hydromulch or crimped long stem hay at any time seeding is conducted. Soil protection is required on bare soils.  
-This plan satisfies the corrective action to submit a weed control plan. Operator needs to control infestation in a timely manner in order to bring location into compliance for weeds.
