1003 f. Weeds Noxious weeds? \_\_\_\_\_

Comment It was observed in this inspection that the pad has been reduced to areas reasonably needed for production; vegetation establishment on interim areas appears to be progressing towards 1003 standards. There are areas on the west end of the Location that appear to have been disturbed due to stormwater erosion; areas will likely require additional seeding to ensure uniform establishment and long term site stabilization occurs.

Comment: There appears to be areas on the west end of the Location where stormwater runoff appears to have degraded the slopes; operator appears to have implemented control measures to manage runoff and stabilize slopes; unclear if control measures are adequate to stabilize slopes. Gravel used to stabilize production areas filling with sediment; advise maintenance to ensure pad remains stabilized, and to prevent offsite sediment transport.
