COMMENTS:

On 3/10/2021, a Form 17 was completed with a beginning pressure of 8 psi and an ending pressure of 0 psi. Gas was present at the beginning of the test but was not continuous. Due to this well not having full surface casing isolation of the Fox Hills, we would like to add this well to our Abatement program. We will install automation, monitor, and blow down as needed for a period of 6 months, ending 9/10/2021. No mitigation measures have occurred to date, the blow downs will begin after email communication with the COGCC engineer

COA Type	Description
	<p>1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare.</p> <p>2. Prior to starting bradenhead mitigation, if a sample has not been collected within the last twelve months collect bradenhead and production gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the COGCC within three months of collecting the samples.</p> <p>3. Operator will implement measures to get an initial estimate of the gas flow rate and/or volume from the bradenhead. During the shut-in period record pressure data to adequately characterize the build-up. This mitigation plan may be used for six consecutive months from the date test reported on the Form 17.</p> <p>4. At the conclusion of the six months (9/10/21), conduct a new bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, sample analysis interpretation, and the flow rate information and pressure data.</p> <p>Shut in bradenhead pressure shall not exceed 50 psig.</p>
