This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	SOILS	TBD	TBD

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

In the center of the pit, a hand auger will be used to delineate vertically and laterally in 1-foot increments to a maximum depth of 5-feet (maximum depth hand auger can extend). Soils will be field screened with a PID and underlying soil conditions noted. A sample will be collected from bottom of the pit from the interval that field screened the highest and analyzed for full Table 915-1. Sample will also be collected from the four side walls. Bayless is requesting a reduce analyte list for the side walls if the pit bottom sample confirms no exceedances in the analytes Bayless is requested to be removed. The reduced analyte list for the side wall is being requested for TPH/BTEX/Inorganics. If impacts are observed extending beyond 5-feet vertically or horizontally, a sample will be collected at the 5-foot depth and results will be submitted on a Supplemental Form 27, along with Bayless' proposed actions to utilize excavation equipment or a geo-probe rig to delineate the full extent of impacts.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Five samples will be collected (1-pit bottom and 4-side walls). Bayless is proposing to analyze the pit bottom for full Table 915-1 and if analytes do not exceed COGCC thresholds, its being requested that the side walls samples be analyzed for a reduced analyte list consisting of TPH/BTEX/Inorganics.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☒ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Borehole delineation via hand auger to evaluate the underlying soil
