COMMENTS:

As a result of the Form 17 bradenhead test performed on 12/29/2020 (Document ID: 402567945), Crestone Peak has added the Kugel 21-18 well to our monthly bradenhead blowdown schedule, due to bradenhead pressure greater than 50 psi. The well is being blown down to 0 psi through our bradenhead test trailer. At the end of the data collection period, Crestone will propose further plans, as needed, to the Commission via Form 4 Sundry. While Crestone has calculated the blowdown emissions for the events and found them to be deminimis, all emissions are permitted under the new CDPHE regs. Crestone will analyze the data and work with the state engineer to implement BACT.

COGCC Approved: Haverkamp, Curtis Date: 5/18/2021

CONDITIONS OF APPROVAL, IF ANY:**Condition of Approval****COA Type****Description**

	Shut in bradenhead pressure shall not exceed 50 psig.
	1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare. 2. Prior to starting bradenhead mitigation, if a sample has not been collected within the last twelve months collect bradenhead and production gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the COGCC within three months of collecting the samples. 3. Operator will implement measures to get an initial estimate of the gas flow rate and/or volume from the bradenhead. During the shut-in period record pressure data to adequately characterize the build-up. 4. By 14-Aug-2021, conduct a new bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, sample analysis interpretation, and the flow rate information and pressure data.
