General Comment:

Environmental inspection related to Rem #14864 and to check overall condition of the location. FI 608306084 had 12 CA related to the location. The current condition of the location has resolved several of the CA but the timing of the resolution is not known. As can be seen in the attached location photographs, the separator, tanks, berms, fencing associated with the production facility have been removed from the location. Imported gravel remains at the well pad and former tank battery and separator areas. This material is required to be removed in order to facilitate final reclamation of the location. The former oil skim and produced water pit area does not appear to have been seeded, no appreciable desirable vegetation has been established and erosion has formed incised channels that require backfill prior to seeding.

Environmental

Spill/Remediation:

Comment: Rem #14864 was intended to be closed on 6/25/2020, however, the "is this a final closure request for this remediation project" question was filled in as "no".

Corrective Action: Submit a supplemental Form 27 requesting final closure of Rem 14864.

Date: 05/31/2021
