COMMENTS:

On 05/03/2021, a Form 17 was completed with a beginning pressure of 45 psi. Oil was present at the beginning of the test, but blew down to 0 psi in under 5 minutes with no measurable gas. Not enough oil was present to sample at that time, but will be collected for the Form 43 once mitigation has begun. Due to suspected thermal pressure, well pressures have reached above 50 psi and require mitigation. Noble will perform blow down(s) if needed until able to perform fluid pull(s) to relieve pressure and allow for expansion in the surface casing for a period of 6 months, ending 11/03/2021. No mitigation measures have occurred to date. The fluid pulls will begin after an email communication with the COGCC engineer

COGCC Approved: JENKINS, STEVE Date: 5/28/2021

CONDITIONS OF APPROVAL, IF ANY:**Condition of Approval****COA Type****Description**

	Shut in Bradenhead pressure shall not exceed 50 psig.
	1. Operator shall implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare. 2. Prior to starting Bradenhead mitigation, if a sample has not been collected within the last twelve months collect Bradenhead and production gas samples for laboratory analysis. Sampling shall comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results shall be provided to the COGCC within three months of collecting the samples. 3. During the first day of mitigation operator shall implement measures to get an initial estimate of the gas flow rate and/or volume from the Bradenhead. During the shut-in period record pressure data to adequately characterize the build-up. This mitigation plan may be used for six consecutive months. 4. At the conclusion of the six months, conduct a new Bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans and the flow rate information and pressure data.
