Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On Tuesday July 14th at approximately 9:30AM, a gathering line release was discovered south east of the Davis 1-6 location. This release was determined to be caused by a bad cold fuse that failed on the 2 inch poly line buried approximately 3 feet below ground surface. Within 20 minutes, the units were shut off and the line was isolated. The pipe was then dug up and clamps were installed. The old fuse will be cut out and replaced with a new one. This was a produced water spill containing no hydrocarbons.
