Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

SITE CONDITIONS

General soil type - USCS Classifications SM Most Sensitive Adjacent Land Use Rangeland

Is domestic water well within 1/4 mile? No Is surface water within 1/4 mile? Yes

Is groundwater less than 20 feet below ground surface? No

Other Potential Receptors within 1/4 mile

The Empire Intake Canal located ~900' to the NE is the only downgradient surface water feature within a 1/4 mile of this location.

Note: There is a monitor well (DWR Receipt #) ~2800' to the NW with a static water level of 11.5', however the elevation of this well is ~50' lower so surface water is not less than 20'. In addition, there is a water well ~4500' to the SE (DWR Receipt # 0314118) with a static water level of 110' at an elevation ~25' lower than this location so again groundwater is likely not less than 20' at this location.

The 1/2 mile Active Eagle Nest Buffer and Mule Deer Severe Winter Range are within the 1/4 mile buffer of this proposed active work area.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to COGCC Rule 911 a site investigation will be conducted pertaining to a partial removal of flowlines on and from the Latham 14-12 location to the cut location where they will be re-routed. Approximately 2500-ft of total flowline will be removed, see site map exhibit for details on individual flowlines. The COGCC will be updated in a supplemental Form 27 if a portion of the flowlines are abandoned-in-place due to field constraints. The Form 44 Document number will be supplied after partial-removal and re-route of these flowlines.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☐ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the flowline areas will occur during abandonment activities. Field personnel will field screen all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling is required. The COGCC Flowline Closure Checklist will be utilized and filled out during the abandonment process. A photolog will be submitted on the Subsequent Form 27.
