Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On June 28, 2021, a release daylighting from the subsurface at the Berig 17-35 location was discovered. The impacted soil was discovered while performing a pressure test of the oil dumphline between the separator and the tank at the facility. The release has been controlled. Approximately 3 gallons of oil were released during the pressure test. Assessment activities are ongoing at the site. The analytical results and assessment details will be provided in a supplemental report. A topographic Site Location Map showing the geographic setting of the release is attached as Figure 1.
