**Inspected Facilities:**

Facility ID	Type	Status	Status Date	Well Class	API Num	Facility Name	Insp Status
470915	SPILL OR RELEASE	CL	04/10/2020		-	NESSSU Consolidated Line	EI
476987	SPILL OR RELEASE	AC	07/02/2020		-	NESSSU CONSOLIDATION	EI

**General Comment:**

Environmental inspection of site of two flowline related spills. Spill 476987 at site remains open as corrective actions required by flowline integrity inspector (doc 690102005 and doc 690101949) have not been adequately completed or addressed. COA for closure of spill 476987 required closure within 45 days of spill with closure required by 2 August 2020. Spill remains open as adequate documentation for closure has not been provided by operator.

Site had open excavation and ineffective and inadequate means of excluding entry of people, livestock or wildlife at time of inspection.

Operator had removed adequate fencing steel panel and not repaired other fencing at site as shown in attached photos

Excavation in attached photos is part of site investigation and remediation project 15797 which remains open at this time.

Operator reported in form 27 that repairs to flowline had been made but that no flowline integrity test had been completed. See Document 402649642 and operator also stated that full lateral and vertical extent of impacts had not been determined as of 6 April 2021.

Corrective actions from past inspection remain open unless documented by FIRR.

Farmer operating in this field reported that he used Fulton ditch waters of the state to irrigate crop field a few days prior to inspection as he reported that is the water source he has used at that field for as long as he has farmed the field.

Farmer also reported that he had contacted Operator prior to flood irrigating the field in effort to prevent or lessen migration of impacts remaining at spill site. He also reported that the excavation had been full of irrigation water as operator had not provided any diversion structures to keep irrigation waters out of excavation.

At time of inspection water had infiltrated through presumably impacted soils in excavation with likely migration of contaminants of concern to groundwater and or spread further in farm soils around excavation. Soils remaining at site are assumed to be impacted as operator has to this date provided no data showing that impacts have been removed for site of spills. And at this time Operator has not shown that they have determined the full lateral and vertical extent of impacts at the site.

**Location**Overall Good: ☐

Emergency Contact Number:

Comment: Corrective Action: Date: **Good Housekeeping:**

Type

WEEDS

Comment:

weeds have developed in area around excavation as farmer cannot utilize tilling or other mechanical means of weed control in disturbed area used by Operator. weeds are present as shown in attached photo in an active crop field.

Corrective Action:

Comply with Rule 606 in cooperation with farmer

Date: 07/02/2021

Facility ID:	476987	Type:	SPILL OR	API Number:	-	Status: AC	Insp. Status: EI

**Environmental****Spill/Remediation:**

Comment: impacted soils remain at site, report by farmer and visual observation during this inspection indicate that Rule 913.b(5)B.iv is not being followed

Corrective Action: Operators will properly store, handle and manage all E&P waste to prevent contamination of stormwater, surface water, groundwater and soil. Manage surface water (irrigation water) and stormwater around spill site in manner that prevents impacts to those matrices.

Date: 07/25/2021
