Photo 1. View the project area from the well pad entrance facing center.

Photo 2. View of the western project area from the southwestern corner facing westward. Revegetation remains weedy and weeds continue to need management. Desirable species include sand dropseed, western wheatgrass, and smooth brome.

Photo 3. View the reference area comprised of open grass field with western wheatgrass, crested wheatgrass, and smooth brome.

Photo 4. View of musk thistles within the project area, largely treated (inset) however untreated individuals remain.

Photo 5. View of reference area comprised of sagebrush shrubland mosaic with gambel oak, pinyon, and juniper trees, with understory of grasses and forbs such as needle and thread, blue grama, and goldenaster.
