## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Foundation is planning to document conditions beneath all equipment at the Devlin 12-32 location (ID:303269) through observation and field screening when equipment is removed. Photos will be taken during removal of equipment and submitted on a Supplemental Form 27. Based on observations of staining or odor, Foundation will collect a minimum of one (1) soil sample from the area beneath each piece of equipment on location -- 1 wellhead, 1 produced water tank, 1 separator and 1 meter shed.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

A minimum of four (4) soil samples will be collected as part of the facility closure investigation, collected after each piece of equipment is removed from the location. The samples will be collected at a depth of 6" below surface from areas showing the highest degree of impact (if apparent impacts are present), or from the areas outlined in COGCC's Rule 911.A.(4) Operator Guidance. A background sample will also be collected. If no indication of a release is present, samples will be analyzed for pH, SAR, EC, boron, naphthalene, 1,2,3 and 1,2,4 trimethylbenzene. If a release is discovered, samples will be analyzed for full COGCC Table 915-1.

## **OPERATOR COMMENT**

This Supplemental Form 27 is being submitted to request closure of the Devlin 12-32 well location (ID: 303269) and REM# 17840. All facility closure soil sample results indicate compliance with Table 915-1, with the exception of pH in the wellhead sample. Consideration is being requested as the pH concentration is comparable to the background sample collected offsite.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
