INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Foundation is planning to document conditions beneath all equipment at the Cure 11-33 well location (ID:304055) through observation and field screening when equipment is removed. Photos will be taken during removal of equipment and submitted on a Supplemental Form 27. Based on observations of staining or odor, Foundation will collect a minimum of one (1) soil sample from the area beneath each piece of equipment on location -- 1 wellhead, 1 produced water tank, 1 separator, and 1 meter shed.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

A minimum of four (4) soil samples will be collected as part of the facility closure investigation, collected after each piece of equipment is removed from the location. The samples will be collected at a depth of 6" below surface from areas showing the highest degree of impact (if apparent impacts are present), or from the areas outlined in COGCC's Rule 911.A.(4) Operator Guidance. A background sample will also be collected. If no indication of a release is present, samples will be analyzed for pH, SAR, EC, boron, naphthalene, 1,2,3 and 1,2,4 trimethylbenzene. If a release is discovered, samples will be analyzed for full COGCC Table 915-1.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

If impacted soils are encountered, the soil will be removed and for proper off-site disposal and the lateral and vertical extent of impact will be determined with confirmation sampling and submitted on a Supplemental Form 27.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Since soil samples have not yet been collected, Foundation will require additional data to develop the remediation plan. However, if impacts are present, soil will be removed and disposed off-site. The results of the sampling activities will be submitted on a Supplemental Form 27.

OPERATOR COMMENT

This Supplemental Form 27 is being submitted to request closure of the Cure 11-33 well location (ID: 304055) and REM# 17986. All facility closure sample results indicate compliance with Table 915-1, with the exception of pH in the wellhead, separator, and meter shed samples. Consideration is being requested as the pH concentration is comparable to the background sample collected offsite.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

Environmental	Based on the information presented, it appears that no further action is necessary at this time and the COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if ground water is found to be impacted, then further investigation and/or remediation activities may be required. In addition, the surface area disturbed by the remediation activity shall be reclaimed in accordance with the 1000 Series Reclamation Rules.	07/27/2021
