Impacted?	Impacted Media	Extent of Impact	How Determined
No	GROUNDWATER	None	Visual inspection
No	SOILS	Minimal	Soil analysis
No	SURFACE WATER	None	Visual inspection

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pit has been previously backfilled. Well was plugged in 2009. COGCC was given 72 hours notice prior to sampling, but representatives were not present during sampling.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

On 5/15/18, Wexpro Company attempted to core sample the backfilled pit area (facility 116630) on the Sugarloaf Stateland 1 well pad, as per the previously approved core sampling plan. The location of the pit was determined using historic Google Earth imagery, site security and GPS coordinates. Several sample attempts were made to obtain a sample of the pit in the area believed to have been most impacted. Depths of the samples were determined by the extent that the auger could reach before hitting rock. Sample #1 was taken from the area that was shown on historic GE imagery (GPS'd), and sample #2 was taken from the area behind a visible showing of gravel, as the tanks on location would have been placed there and site security showed the pit behind the tanks. See attachments for sample information.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A visual inspection was performed looking for signs of stained soil and potential leeching of pit components that may have impacted surface of ground water, none were found.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A visual inspection was performed looking for signs of stained soil and potential leeching of pit components that may have impacted surface of ground water, none were found.

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):
