General Comment:

On 7/29/2021 Catherine Roy conducted a reclamation and stormwater inspection. It is apparent that recent precipitation has resulted in flood/stormwater transport across the well pad. During this inspection the following compliance issues were observed:

-Report spill or release of E&P waste or produced fluids Remove free fluids and contact COGCC EPS staff per Rule 912.b. by within 24 hours of receiving this report (7/31/2021). Remove any free fluids within 24 hours of receiving this report (7/31/2021), and submit a Form 19 within 72 hours of receiving this report (8/2/2021).

-Remove and properly manage gravel, rock, and material displaced and discharged downslope of the well pad. Remove and properly dispose of debris deposited on well pad and around facilities. Submit (as an attachment to a Form 4) and implement a plan to properly divert and protect the location from degradation during significant stormwater events on the well pad using good engineering practices. All inlets and outlets need to be properly designed and constructed to ensure stabilization. Corrective action date is the day of the inspection (7/29/2021) as it is required that the corrective action be addressed immediately.

-Per Rule 421.b. for wells within the 100 year floodplane submit as an attachment to a Form 4, Operator's Flood Shut-In Plan by 8/2/2021.

This is a shared location between Simcoe and Logos. It is the responsibility of both operator's to ensure compliance with COGCC rules.

Per communication with Steve Labowskie on 7/29/2021, Operator was contacted and notified of issues observed at this time.

See below, and attached photos for additional detail.

Comment: Large volumes of well pad material is washed downslope from the well pad and likely into the Florida River. Debris is deposited around well facilities.

Corrective Action: -Remove and properly manage gravel, rock, and material displaced and discharged downslope of the well pad. Remove and properly dispose of debris deposited on well pad and around facilities. Submit (as an attachment to a Form 4) and implement a plan to properly divert and protect the location from degradation during significant stormwater events on the well pad using good engineering practices. All inlets and outlets need to be properly designed and constructed to ensure stabilization. Corrective action date is the day of the inspection (7/29/2021) as it is required that the corrective action be addressed immediately.

Date: 07/29/2021

Pits: ☒ NO SURFACE INDICATION OF PIT
