Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Area background samples have previously been collected for Arsenic. Caerus requests Arsenic concentration of comparable background which have been identified at (4.5-6.8mg/kg) see previously submitted document #402591029, #402574382, and #402574381.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☒ Is further site investigation required?

Per COGCC verbal request, additional sampling will be necessary for vertical delineation of SAR and EC. Under COGCC Rule 915.f, Caerus requests the Director's permission to comply with the version of Table 910-1 that was previously in effect if Remediation is completed by January 15, 2022. Caerus proposes 2 soil borings within the triangular area identified with 910-1 exceedances for SAR and EC to determine vertical delineation. See attached map. The number of spill investigation points may vary based on onsite assessment. As part of the historic spill project review and document preparation, Caerus will be implementing a phased approach to prioritize sampling and investigation projects. This Remediation Workplan includes a proposed site investigation plan. With approval and weather permitting, investigation activities will be conducted, and results will be reported in a supplemental Form 27.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The remediation plan is on hold pending vertical definition sampling. (Caerus proposed to excavate and stockpile the top six inches of soil for post remediation reclamation and excavate approximately 52 c.u. yard of SAR impacted soils see figure 2. the top 6" will be blended with imported topsoil and recontoured to meet pre-excavation grade, refer to Document # 402529576.)

REMEDIAL SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

A reduced analyte suite was approved on 11/19/2020 doc # 402529576. pending 915.f. approval vertical delineation will occur for SAR and EC analytes.
