Groundwater Monitoring Report for the P32-596 Water Management Facility, Spring 2020

Nicholson GeoSolutions LLC conducted groundwater monitoring near the Berry Petroleum Company P32-596 water management facility located on Old Mountain in Garfield County, Colorado on May 23rd, 2020. Three monitoring wells were installed around the facility in 2014 to provide groundwater monitoring capability for the permit. Figure 1 provides the locations of the monitoring wells. The facility is located on the top of Old Mountain adjacent to Deep Gulch. The three wells are gauged semi-annually to check for groundwater in accordance with the facility permit and samples are collected if sufficient water is present.

Total Depth and Water Levels

Total depth and water levels were measured in each monitoring well using an electronic water level indicator. The water level data are provided in Table 1.

Table 1 P-32 Water Facility Total Depths and Water Levels – May 23, 2020

Monitoring Well ID	Total Depth (feet below top of casing)	Water Level (feet below top of casing)	Water Column Thickness (feet)
MW-1	31.71	dry	dry
MW-2	33.67	33.38	0.29
MW-3	32.40	28.94	3.46

Well MW-2 contained 0.29 feet of water, insufficient for sampling or bailing. MW-1 was dry. Approximately 3.46 feet of water was present in well MW-3. This well was sampled without bailing to capture a vadose-zone groundwater sample.

Sampling Procedures

One unpurged groundwater sample was collected from monitoring well MW-3. Measurements of pH, specific conductance (SC), and water temperature (T) were made using an Oakton 300 combination meter during sampling. The sample was collected into new, pre-preserved sample containers provided by the laboratory. The sample bottles were labeled, placed in plastic zip-lock bags, and stored immediately on ice in a cooler. The sample was shipped to the Pace National Environmental Laboratory in Mt. Juliet, Tennessee for analysis. Chain-of-custody procedures were followed during collection and shipping of the sample.

Laboratory analyses consisted of the following: benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8021B; dissolved sodium by EPA Method 6010B; chloride, fluoride, nitrate, nitrite, and sulfate by EPA Method 9056A; nitrate-nitrite by EPA Method 353.2; total

alkalinity by EPA Method 2320B; ammonia by EPA Method 350.1; total dissolved solids (TDS) by EPA Method 2540C; methane, ethane, and ethene by Method RSKSOP-175M; and Total Petroleum Hydrocarbons (diesel and gasoline range) by EPA Method 8015.

Results

Table 2 summarizes the field parameters and laboratory analytical results for the sample collected. The laboratory analytical report is included in Appendix A. All results are below the associated Federal and Colorado aquatic life standards except for ammonia. Ammonia was reported at 1.45 mg/l, above the aquatic standard of 0.02 mg/l. All petroleum constituents were reported as not detected, except for methane at 2.95 mg/l. Trace concentrations of methane are occasionally reported in groundwater in the area and are considered to be naturally occurring.

Table 2 P-32 Water Facility Groundwater Monitoring Results for Spring 2020

Parameter	Standards		Sample ID and Date
	Colorado Aquatic Life Standards ³	EPA Drinking Water Standards	
Field Parameters			
sp. conductance ($\mu\text{S}/\text{cm}$)			724
pH (standard units)	6.5-9.0	6.5-8.5 ²	7.37
temperature ($^{\circ}\text{C}$)			8.6
General Water Quality Parameters			
total alkalinity			337
TDS		500 ²	395
Organic Constituents			
total petroleum hydrocarbons, diesel range			<0.1
total petroleum hydrocarbons, gasoline range			<0.1
benzene	5.3	0.005 ¹	<0.0005
toluene	17.5	1 ¹	<0.001
ethylbenzene	32	0.7 ¹	<0.0005
xylenes	C ⁴	10 ¹	<0.0015
methane			2.95
ethane			<0.013
ethene			<0.013
Anions			
dissolved sodium			61.0
ammonia	0.02 ⁵		1.45
chloride		250 ²	4.48
fluoride		4 ¹ , 2 ²	0.158
nitrate		10 ¹	<0.1
nitrite		1 ¹	R
nitrate-nitrite			0.718
sulfate		250 ²	15.1

All results in mg/l except where indicated $\mu\text{S}/\text{cm}$ = microSiemens per centimeter R = value rejected during data validation

¹Federal Drinking Water Maximum Contaminant Level (MCL) ²Federal Drinking Water Secondary Standard ³Chronic aquatic life standard (Colorado Water Quality Standards, 5 CCR 1002-31).

⁴Carcinogenic compounds as classified by the EPA

⁵Chronic. Acute ammonia standard calculated based on 0.43/FT/FPH/2, where FT = acute temperature adjustment and FPH = acute pH adjustment.

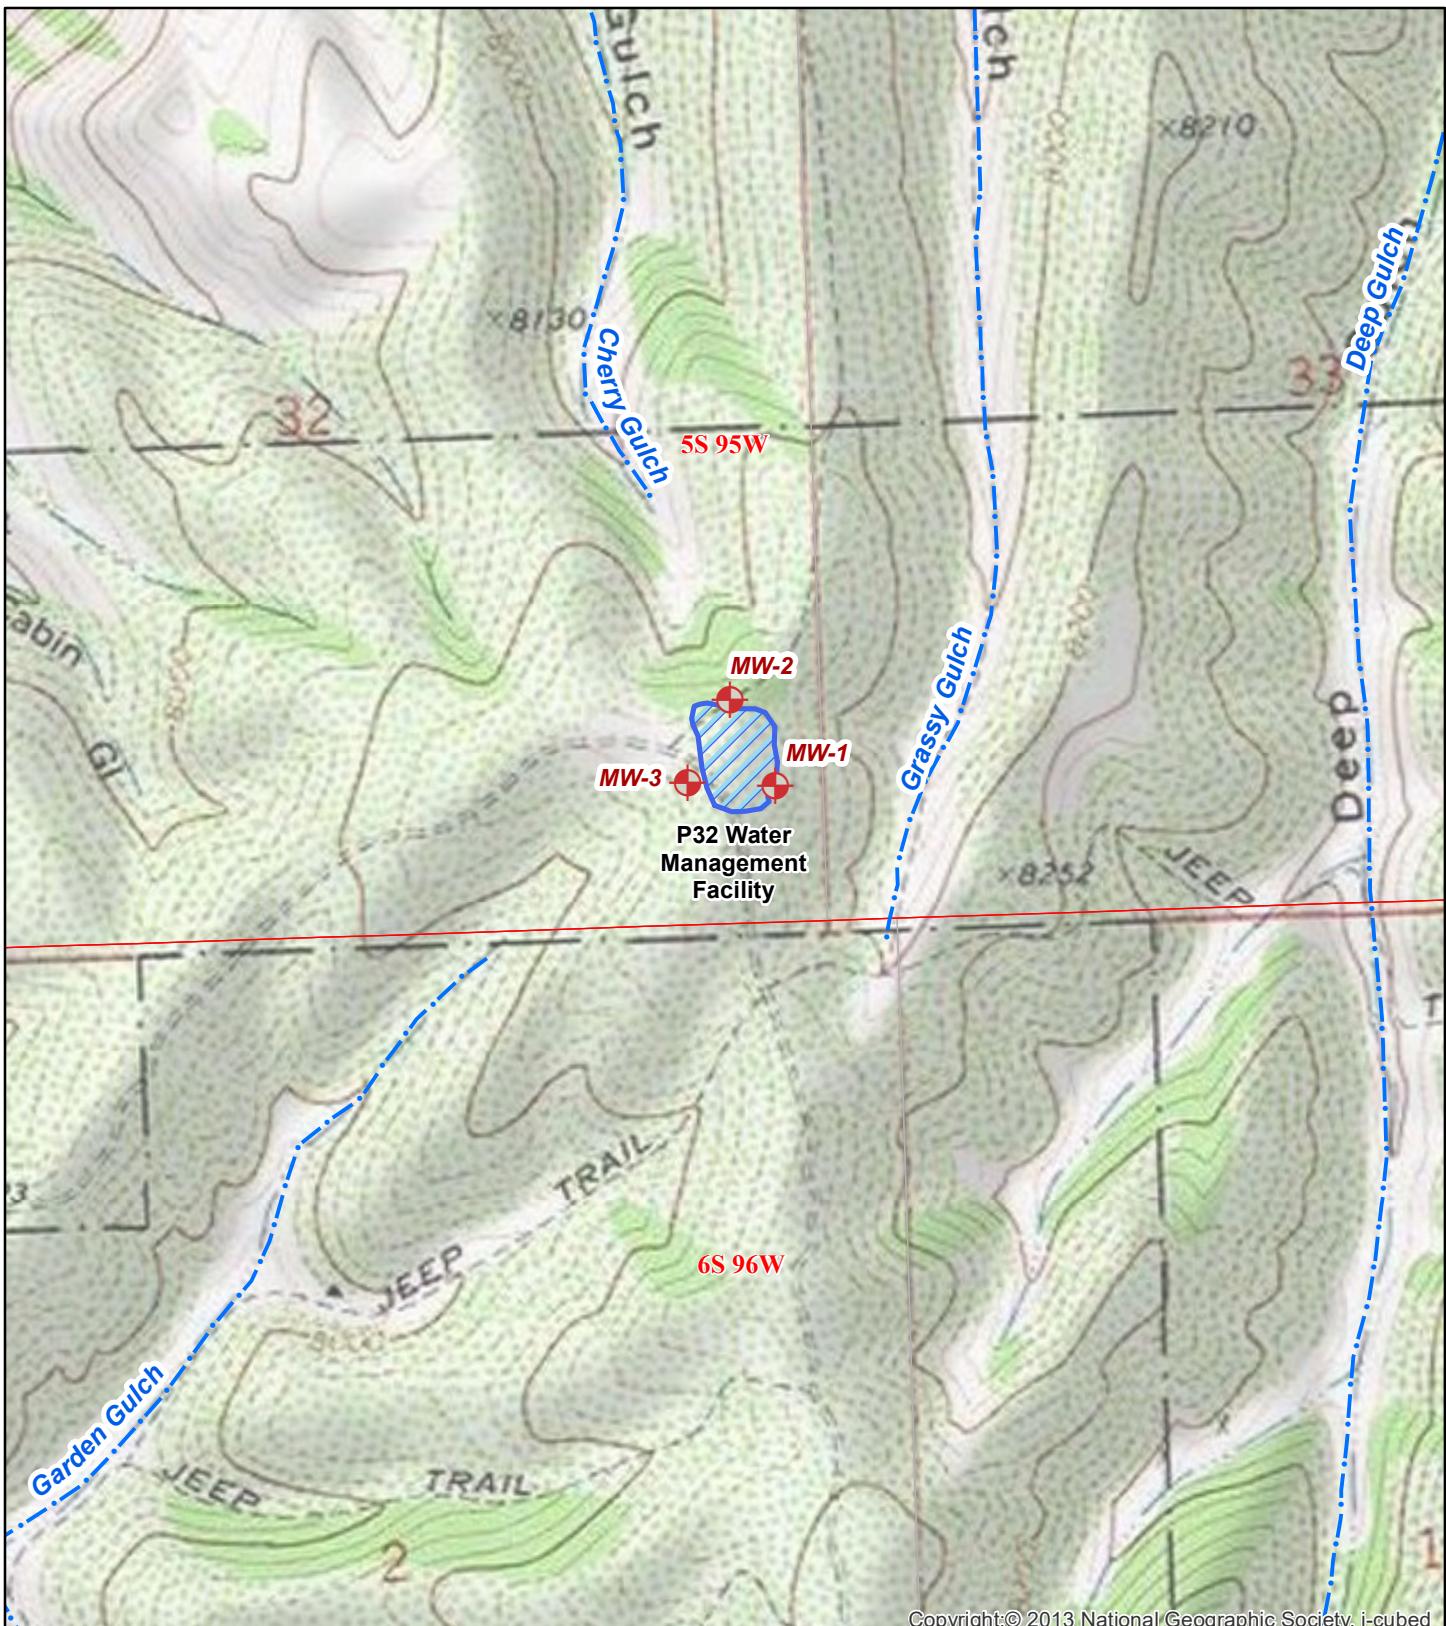

A data review was conducted using the quality assurance report supplied by the laboratory and standard EPA data validation guidelines. All analyses were conducted within the recommended holding times except for nitrite (4 days). Nitrite was rejected “R” based on exceeding the holding time by more than 100%. All method blank results were reported as not detected. All laboratory

control sample (LCS), laboratory duplicate, surrogate, and matrix spike/matrix spike duplicate (MS/MSD) recoveries (for QA samples prepared using the samples from this event only) were within the laboratory control limits.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.	¹ Cp
ND	Not detected at the Reporting Limit (or MDL where applicable).	² Tc
RDL	Reported Detection Limit.	³ Ss
Rec.	Recovery.	⁴ Cn
RPD	Relative Percent Difference.	⁵ Sr
SDG	Sample Delivery Group.	⁶ Qc
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.	⁷ Gl
U	Not detected at the Reporting Limit (or MDL where applicable).	⁸ Al
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.	⁹ Sc
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.	
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.	
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.	
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.	
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.	
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.	
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.	
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.	
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.	
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.	
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.	

Qualifier

Description

J	The identification of the analyte is acceptable; the reported value is an estimate.
T8	Sample(s) received past/too close to holding time expiration.

Pace National is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.

- * Not all certifications held by the laboratory are applicable to the results reported in the attached report.
- * Accreditation is only applicable to the test methods specified on each scope of accreditation held by Pace National.
