**Producing Well**

Comment: Producing. Freeflowing well with large compressor. Note: if well is being produced under vacuum conditions, approval would be needed.

Corrective Action:

Date:

**Complaint**

Comment: Complaint #402770006 for noise experienced at residence south of well pad. A 3M SoundProDL meter was used calibrated before and after survey. A link to sound survey reports is at end of report. Low frequency measurements were taken at residence first, 25' from exterior wall and 5 feet from ground. The 19 minute survey averaged 61.6 db(c).

At the equipment, readings were taken at edge of pad due to topography dropping off in direction of residence. Sound levels were then calculated to the 350' equivalent. 61.2 db (a) @ 69' = 47 db(a) @ 350'

Note: the muffler is pointed on the side oif equipment that faces residence, re configuring muffler and sound panels could make improvements to the low frequency noise experienced by complainant.

Corrective Action:

Date:
