Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

UNDETERMINED	SOILS	To be determined	Laboratory analysis

**INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This form is being submitted to comply with COGCC Rule 911.a.(4) and COAs requiring the removal of unused equipment on location. This form serves as the initial notification to remove the dehy unit and partially buried tank at the location.

**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

As part of the partially buried tank removal process, Caerus will visually inspect and field screen the base and side walls of the tank removal excavation. Caerus will also visually inspect and field screen the area below the dehy unit. If field screening indicates impacts to soil in any of these locations, sample (s) will be collected from the areas exhibiting the highest degree of impacts to be analyzed for the full list of constituents listed in COGCC Table 915-1. Any impacted soil will be segregated, stockpiled on location, and the vertical and horizontal extent of impacts will be investigated through additional excavation and confirmation soil sampling. Continued in "Additional Investigative Actions" below.

**Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Groundwater is not expected to be encountered during the proposed activities. In the event that groundwater is encountered during the removal of the partially buried tank and dehy unit, the COGCC will be notified, and a representative sample will be collected and submitted for laboratory analysis for constituents listed on COGCC Table 915-1.

**Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

**Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Continuing from "Proposed Soil Sampling": If no impacts are observed, one sample will be collected from the base of the excavation for the partially buried tank, and one sample will be collected from the base below the dehy unit. All samples will be submitted for laboratory analysis of the full list of constituents listed in COGCC Table 915-1.

**REMEDIAL ACTION PLAN**

**SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

No source removal is warranted at this time as no impacts associated with the partially buried tank or dehy unit have been identified. If impacts are identified, an assessment will be made to determine the appropriate strategy for impact removal.

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

A remediation plan will be presented to the COGCC if impacts are observed during the proposed activities.
